

# Learn How Primary Care Physicians Can Help Prevent Elder Suicide

## JOIN US FOR A WEBINAR AND LEARN MORE!

Geriatric depression and suicide risk often go under-identified and treated in primary care. However, primary care physicians (PCPs) working with elderly patients at health centers and elsewhere have key opportunities to intervene. Join our webinar with Dr. Virna Little, nationally known suicide prevention expert and Zero Suicide faculty member, to learn about unique factors in geriatric suicide and depression and how providers can act for prevention.

For help on geriatric suicide prevention, refer to the new *Suicide Safer Care, A Toolkit for Primary Care Providers Working with Geriatric Patients* toolkit. The toolkit is available on the Association of Clinicians for the Underserved website at [clinicians.org](http://clinicians.org).

## Learning objectives

- Provide an overview of geriatric suicide, the role of geriatric depression, and PCPs' important roles in prevention.
- Discuss common risk factors and warning signs.
- Describe screening tools, clinical pathways and evidence-based interventions for geriatric suicide prevention.
