Prenatal and Postpartum Depression Screening

MEET 2026 DEPRESSION SCREENING AND FOLLOW-UP REQUIREMENTS

Early screening, documentation, and follow-up are critical steps to improve maternal and infant health outcomes.

New Medi-Cal performance requirements

Beginning in 2026, the following HEDIS®[1] measures are included in the Medi-Cal Managed Care Accountability Set and are subject to the minimum performance level:

- Prenatal Depression Screening and Follow-up (PND-E; screening only)
- Postpartum Depression Screening and Follow-up (PDS-E; screening only)

Key measures focus on:

1. Screening
2. Documentation
3. Follow-up

Required provider actions

1 ***Screen for depression***

Prenatal patients

- Screen at the first prenatal visit or as early as possible
- Repeat screening during each trimester

Postpartum patients

- Screen between 1 and 12 weeks (84 days) after delivery
- Screen again as clinically appropriate

Validated tools include:

- Patient Health Questionnaire-2 (PHQ-2)
- Patient Health Questionnaire-9 (PHQ-9)
- Edinburgh Postnatal Depression Scale (EPDS)

(continued)

2 *Document all screening results*

For every screening, be sure to document:

- Screening tool
- Relevant Logical Observation Identifiers Names and Codes (LOINC codes)
- Date of screening
- Score and interpretation
- Estimated delivery date (during prenatal period)

Document both positive and negative screening results.

3 *Complete follow-up for positive screens*

Complete and document follow-up care within 30 days of a positive depression screening.

Refer to the Plan for non-specialty mental health services and care management support, as appropriate.

Examples of qualifying follow-up care include:

- Outpatient, phone or virtual visit with a diagnosis of depression or other behavioral health condition.
- Dispensed antidepressant medication, when appropriate

Why depression screening matters

Maternal depression is a common and serious complication of pregnancy and childbirth and can affect both maternal and infant health outcomes. Timely screening and follow-up can help identify patients who need support and reduce the risk of conditions like:

- Preterm birth[3]
- Low birth weight[3]
- Delays in infant development[3]
- Maternal morbidity and mortality, including suicide[2,3]

Provider resources

- Eligible members can register for Teladoc at **www.teladochealth.com** and schedule virtual behavioral health appointments with licensed behavioral health professionals.
- Access the Care Management Referral Form at **bit.ly/forms-references** or scan the QR code.
  - Select the appropriate form version from the alphabetical list.
- Access the PND-E and PDS-E tip sheets on the HEDIS Measures & Billing Codes page at **bit.ly/HEDIS-tip-sheets** or scan the QR code.
  - Located under "Reproductive Health."
- Patients can always reach out to the Customer Contact Center (listed on the back of their Plan ID card) for support on covered benefits and programs.
