

Learn How to Address Medical Needs for Patients with SPMI

Use this tip sheet to review key details of the measures, best practices and resources for the severe and persistent mental illness (SPMI) HEDIS measures below.

Patients diagnosed with schizophrenia are at greater risk of metabolic syndrome and heart diseases due to their serious mental illness.¹ They are also inclined to have higher levels of blood cholesterol and receive less treatment.²

Antipsychotic medications elevate patient risk for diabetes, elevated blood cholesterol levels and metabolic syndrome.^{1,3} The elevated risk affirms the need to screen and monitor for heart conditions and diabetes through screenings and monitoring tests.^{1, 2, 3}

Measures	Diabetes Screening for People with Schizophrenia or Bipolar Disorder Who Are Using Antipsychotic Medications (SSD)	The percentage of members ages 18–64 with schizophrenia, schizoaffective disorder or bipolar disorder who were dispensed an antipsychotic medication and had a diabetes screening during the calendar year.
	Diabetes Monitoring for People with Diabetes and Schizophrenia (SMD)	The percentage of members ages 18–64 with schizophrenia or schizoaffective disorder and diabetes, who had both an LDL-C test and an HbA1c test during the calendar year.
	Cardiovascular Monitoring for People with Cardiovascular Disease and Schizophrenia (SMC)	The percentage of members ages 18–64 with schizophrenia or schizoaffective disorder and cardiovascular disease, who had an LDL-C test during the calendar year.
Exclusions	SSD, SMD, and SMC	 Patients in hospice or using hospice services anytime during the measurement year.
	SSD	 Patients diagnosed with diabetes, based on claim/encounter data or pharmacy data. Patients who had no antipsychotic medications dispensed during the calendar year.
	SMD	 Patients who did not have a diagnosis of diabetes during the calendar year or prior year. Patients who had a diagnosis of polycystic ovarian syndrome, gestational diabetes, or steroid-induced diabetes during the calendar year or prior year.

Antipsychotic medications ⁴	Diverse antipsychotic agents	 Aripiprazole Asenapine Iloperidone Brexpiprazole Loxapine Quetiapine Cariprazine Lurasidone Risperidone Clozapine Molindone Ziprasidone
	Phenothiazine antipsychotics	 Chlorpromazine Perphenazine Fluphenazine Prochlorperazine Trifluoperazine
	Thioxanthenes	Thiothixene
	Long-acting injections	 Aripiprazole Fluphenazine decanoate Haloperidol decanoate Risperidone
	Review the monitoring methor	• When clinically appropriate, prescribe or switch

Best practices

- Review the monitoring methods below for patients on second-generation antipsychotics (SGA).⁵
- The Consensus Development Process (CDP)⁵ also recommends:
 - Patient, family and caregiver education.
 - Refer to specialized services when needed.
 - When prescribing an SGA, perform a baseline screening and monitor the prospect for developing heart disease, diabetes or other diabetes issues.
- When clinically appropriate, prescribe or switch patients to medications with lower metabolic risk.
 The side effects table below determines which medication has lower risk and maintains clinical stability.⁶
- As CalViva Health's downstream subcontractor and Health Net's* behavioral health subsidiary, MHN administers behavioral health services to CalViva Health members. Refer to MHN at 888-893-1569 if you have any questions. Press '*' for mental health crisis. Press '1' for member calls. Press '2' for provider calls including behavioral health and interpreter or language assistance.
- Refer to the side effects on the antipsychotic medication table from the National Institutes of Health.

Endorsed screening and schedule⁵

Metric type	Scheduling guidance		
Personal/family medical history	• Baseline	• Yearly	
Weight	• Baseline	• At four weeks, eight weeks and 12 weeks	• Quarterly
Waist circumference	• Baseline	• Yearly	
Blood pressure	• Baseline	• At 12 weeks	• Yearly
Fasting plasma glucose	Baseline	• At 12 weeks	 Yearly – Measure fasting plasma glucose level is preferred; however, the measure of hemoglobin A1c is common if a fasting plasma glucose test is not feasible.
Fasting lipid profile	• Baseline	• At 12 weeks	Every five years

Antipsychotic medication side effects^{6,7}

Class	Generic name	Metabolic abnormalities ^{††}	Drug-induced movement disorders (Tardive dyskinesia)†††	Hyperprolactinemia
	Aripiprazole	Minimal risk	Low risk	Minimal risk
	Asenapine	Unknown	Unknown	Unknown
	Clozapine	High risk	Minimal risk	Minimal risk
	Iloperidone	Unknown	Unknown	Unknown
Second generation	Lurasidone	Unknown	Unknown	Unknown
antipsychotics (SGA) or atypical	Olanzapine [†]	High risk	Low risk	Low risk
	Paliperidone [†]	Moderate risk	Moderate risk	High risk
	Quetiapine [†]	Moderate risk	Low risk	Low risk
	Risperidone [†]	Moderate risk	Moderate risk	High risk
	Ziprasidone	Minimal risk	Low risk	Low risk
	Chlorpromazine	High risk	Low risk	Moderate risk
Commonly used	Fluphenazine [†]	Low risk	High risk	High risk
first generation antipsychotics	Haloperidol [†]	Low risk	High risk	High risk
. ,	Perphenazine	Moderate risk	Moderate risk	Moderate risk

[†]Long-acting injectables may have the same side effect profile as the oral preparations. Some advantages for long-acting preparations due to more uniform serum concentrations may be possible.⁶

Screening/test type	Measure	СРТ	CPT-CAT-II
Glucose lab test	SSD	80047, 80048, 80050, 80053, 80069, 82947, 82950, 82951	N/A
HbA1c lab test, test result or finding	SMC, SMD	83036, 83037	3044F, 3046F, 3051F, 3052F
LDL-C lab test	SMC, SMD	80061, 83700, 83701, 83704, 83721	3048F, 3049F, 3050F

CalViva Health is a licensed health plan in California that provides services to Medi-Cal enrollees in Fresno, Kings and Madera counties. CalViva Health Contracts with Health Net Community Solutions, Inc. to provide and arrange for network services. *Health Net Community Solutions, Inc. is a subsidiary of Health Net, LLC and Centene Corporation. Health Net is a registered service mark of Health Net, LLC. All other identified trademarks/service marks remain the property of their respective companies. All rights reserved.

Managed Health Network, LLC (MHN) is a subsidiary of Health Net, LLC and Centene Corporation. The MHN family of companies includes Managed Health Network and MHN Services, LLC. Health Net and Managed Health Network are registered service marks of Health Net, LLC or its affiliates. All rights reserved.

^{††}Given the significant overlap in risk, weight gain, lipid abnormalities and diabetes combined into one category.6

^{†††}Refers to drug-induced movement disorders. Tardive dyskinesia refers to involuntary movements affecting orofacial and tongue muscles. 7
